National Preparedness Month

September is recognized as National Preparedness Month. This September, National Preparedness Month will focus on planning, with an overarching theme “Disasters Don’t Plan Ahead. You Can.” We should all take action to prepare! We are all able to help first responders in our community by training how to respond during an emergency and what to do when disaster strikes — where we live, work, and visit. The goal of NPM is to increase the overall number of individuals, families, and communities that engage in preparedness actions at home, work, business, and school.

The 2017 International Association of Chief of Police Annual Conference and Expo

Every year, the International Association of Chiefs of Police (IACP) Annual Conference and Expo provides powerful advantages, bringing together an unmatched educational program, renowned keynote speakers, community-building special events and the largest collection of tactical equipment and technology solutions available. Join thousands of dedicated professionals from federal, state, county, local and tribal agencies on October 21-24, 2017 in Philadelphia, Pennsylvania.

To learn more about the event, please visit the following website: http://www.theiacpconference.org/

First Responder Appreciation Award

The First Responder Appreciation Award was presented to Frank Gentilquore with Bald Eagle Towing at the recent Collier-Lee-Charlotte Traffic Incident Management (TIM) Team meeting. The TIM Team in District One has established the First Responder Appreciation Award in order to distinguish leaders in the TIM discipline.

The nomination is open to all disciplines and agencies who are a part of the Florida Department of Transportation District One TIM teams: Collier-Lee-Charlotte, Sarasota-Manatee and Polk County. This award recognizes first responders that go “above and beyond” their duty while responding to incidents on the local highways.

Frank Gentilquore has been a true champion in both the towing industry and the Traffic Incident Management community.

If you would like to nominate a first responder that has gone “above and beyond” their duty, please contact Brandy Boccuti, TIM Coordinator, at bboccuti@metriceng.com and/or (407) 949-4283.

National Teen Driver Safety Week

Motor vehicle crashes are the leading cause of death for 15- to 19- year olds in the United States. In fact, in 2014 there were 2,679 teen (15 to 19) passenger vehicle drivers involved in fatal crashes and an estimated 123,000 teens were injured. Parents need to take the time to talk with their kids about the many dangers of driving. Those dangers include alcohol, lack of seat belt use, distracted driving, speeding, and extra passengers.

These free safety materials can help start the conversation with your teen driver about the rules of the road. Even if you think they don’t hear you, they do. Set the Rules Before They Hit the Road.

To learn more, please visit the following website: https://www.trafficsafetymarketing.gov/get-materials/teen-safety/national-teen-driver-safety-week
Emergency Shoulder Use
The newly implemented Hard Shoulder Running (HSR) emergency evacuation plan was recently “put to test” during Hurricane Irma. More specifically, in Florida, the adapted name is called Emergency Shoulder Use (ESU) which is Florida’s innovative strategy to increase traffic capacity during major hurricane evacuations using existing paved shoulders. Covering key corridors within the state, ESU plans replace the former contraflow or one-way plans.

The ESU plans cover the following roadway segments:

- Interstate 4 - Eastbound from Tampa (Hillsborough County) to Kissimmee (Osceola County)
- Interstate 10 - Westbound from Jacksonville (Duval County) to Lake City (Columbia County)
- Interstate 75 - Northbound from Wildwood (Sumter County) to the Georgia State Line (Hamilton County)
- Interstate 75 Alligator Alley - Northbound from Weston (Broward County) to Naples (Collier County) and Southbound from Naples (Collier County) to Weston (Broward County)

Emergency responders frequently drive on shoulders to reach incident scenes and use shoulders to park while responding to incidents. There are concerns over the potential loss of the ability to bypass congested traffic and remain out of the travelled way when responding to incidents. Incident response plans developed during the planning of hard shoulder use can mitigate these concerns. “Sweeps” of the shoulder before it opens and the construction of turnouts reduce the likelihood of the shoulder being blocked. A fleet of dedicated incident response vehicles positioned at multiple locations along the facility can also decrease incident response times.

If dynamic signs are used, additional incident management and response options are available. Local emergency response agencies should be given the authority to order the closure of the shoulder and have a clear line of communication to the Traffic Management Center (TMC) for doing so. Closing the shoulder clears it of vehicles and provides emergency responders with an uncongested path to incident scenes.

Successful deployment requires a well-planned, interdisciplinary collaboration with a variety of different stakeholders, including planning, operations, design, maintenance, and executive leadership staff within a Department of Transportation; law enforcement; emergency responders; bus operators; MPO staff; and FHWA Division Office staff.

To learn more and to view the Florida Department of Transportation ESU video, please visit the following website at: http://fdot.gov/emergencymanagement/esu/

Additionally, at the next round of Traffic Incident Management (TIM) Team meetings on October 11th, first responders will be able to discuss and share any “lessons learned” from the recent emergency evacuation event during Hurricane Irma.
